XO communications

Bandwidth-on-Demand

Benefits:

- Cost Effective: You'll have "always on" 1G or 10G bandwidth at the ready without having to pay for dedicated connections

- High-Performing: Your cloud based applications will work as expected because your network is always available to support them

- Secure: VPN protocols offer stronger protection than using the public Internet to access the cloud.

- Available Where You Conduct Business: Connect your local, national and international locations using XO's extensive network.

Provide users with secure access to cloud applications from across your entire network while lowering your network costs by adding XO's Bandwidth-on-Demand feature.

Using the feature, your XO MPLS IP-VPN or VPLS wide area network (WAN) can easily scale to accommodate fluctuating bandwidth demands.

Achieve High-Speed, Always-On Connectivity to Your Cloud

IT and network managers are looking for a better way to scale network bandwidth to support cloud applications.

Imagine being able to eliminate the frustrating process of provisioning network connectivity, circuit by circuit, as well as the added expense of overbuying bandwidth to accommodate spikes in bandwidth needs.

XO Bandwidth-on-Demand provides your business with flexibility and scalability to support multi-cloud deployments and can also be used to interconnect your data centers.

This is increasingly important as businesses look to a combination of public, private and hybrid cloud architectures to meet their business and IT requirements.

How It Works

With XO Bandwidth-on-Demand companies simply commit to a minimal amount of bandwidth needed on an average monthly basis.

Should network usage rise above the committed level, the XO network connection will automatically expand to accommodate the extra traffic—while also maintaining any pre-selected, Quality of Service (QoS) settings.

There's no need for you to pre-schedule bandwidth bursting in advance. XO Bandwidth-on-Demand automatically accommodates fluctuating usage—and simply works in the background when you need it—to ensure availability and consistent performance.

XO communications
Solutions you want. Support you need.

Use Bandwidth-on-Demand to power your cloud computing and data center strategies:

- Gain scalable, cost-effective, high-speed connections
- Directly connect to one or more cloud providers
- Interconnect data centers with flexible bandwidth
- Eliminate your need to buy over-the-top bandwidth as a safeguard against spikes and surges in your network traffic
- Ensure availability and improve performance of cloud applications
- Maximize your investments in the cloud

Move at the Speed of Today's Business

With XO Bandwidth-on-Demand, you'll implement direct network connections to the cloud that will accommodate fluctuating usage in an efficient, secure, and cost-effective manner. Get the fastest network on-ramps to support your organization's multi-cloud strategies.
